

# IT Firewall & Network Requirements

HospitAI & Wedja AI Platforms - Senzo Mall, Hurghada

23 March 2026

**To:** IT Team & FC (Ayman)  
**From:** Management  
**Re:** IT Firewall Requirements - HospitAI & Wedja

This document outlines the network/firewall configuration required for two AI platforms used at our properties. Both platforms are cloud-hosted and require HTTPS (port 443) access only. Please whitelist the following domains and exclude them from SSL inspection if enabled.

## Section 1: HospitAI - AI Hotel Operating System

**Platform:** app.hospitai.uk  
**Purpose:** AI-powered hotel management for Bastet Hurghada (270-unit aparthotel)

**Domains to Whitelist:**

| Domain                          | Purpose                   |
|---------------------------------|---------------------------|
| app.hospitai.uk                 | Main application          |
| hospitai.vercel.app             | Hosting (fallback)        |
| *.vercel.app                    | Vercel CDN & assets       |
| zzsbzquibzqznudnute.supabase.co | Database & authentication |
| *.supabase.co                   | Realtime websockets (WSS) |
| api.anthropic.com               | AI Brain (Claude API)     |
| fonts.googleapis.com            | Google Fonts              |
| fonts.gstatic.com               | Font files                |

## Section 2: Wedja - AI Property Management Platform

**Platform:** app.wedja.ai  
**Purpose:** AI-powered property management for Senzo Mall (170,000 sqm, 166 tenants)

**Domains to Whitelist:**

| Domain           | Purpose             |
|------------------|---------------------|
| app.wedja.ai     | Main application    |
| wedja.vercel.app | Hosting (fallback)  |
| *.vercel.app     | Vercel CDN & assets |

|                                 |                           |
|---------------------------------|---------------------------|
| zzsbzquibzqznudnute.supabase.co | Database & authentication |
| *.supabase.co                   | Realtime websockets (WSS) |
| api.anthropic.com               | AI Brain (Claude API)     |
| fonts.googleapis.com            | Google Fonts              |
| fonts.gstatic.com               | Font files                |

---

### Section 3: Technical Notes

- All traffic is encrypted HTTPS (port 443) only
- WebSocket Secure (WSS) connections are used for real-time data
- If SSL/TLS inspection is enabled on the firewall, these domains MUST be excluded from inspection - otherwise the apps will fail to connect
- No inbound ports need to be opened - all connections are outbound
- If \*.vercel.app and \*.supabase.co are whitelisted, both platforms will work

---

### Section 4: Action Required

#### For IT Team:

1. Whitelist all domains listed above on the corporate firewall
2. Exclude listed domains from SSL inspection
3. Confirm access from office PCs and mall network
4. Test by visiting app.hospitai.uk and app.wedja.ai from a mall-connected device

#### For FC (Ayman):

1. After IT confirms whitelist is applied, test both apps from your office PC
2. Report any connection issues (timeout, SSL errors, blank page)
3. Confirm you can log in and see the dashboard
